ABSTRACT

Departing from the rampant behavior of corruption with varied modes and does not recognize the status of the perpetrators, it became the basis of initial interest in this research study. The pattern of education and parenting of parents who are instilled from an early age will shape the character of the child in the future. This study aims to 1) examine the factual model of smart parenting management in anti-corruption character education currently held.this2)"Develop a social media-based smart parenting management model in anti-corruption character education""

This study took data from teachers and parents in the Central Java region, using the "Research and Development" method. Data were obtained through observations, questionnaires and in-depth interviews, structured and unstructured, with teachers and parents of students. Test the validity of the data used validity and reliability tests and triangulation. Data analysis techniques using qualitative descriptive analysis and Delphi analysis

The results of the study: 1) The factual model of smart parenting management shows that parents have paid enough attention to children's character education, as well as teachers. However, there is no good coordination between them. Not yet integrated and organized between parenting at home and school. 2)"The smart parenting management model in anti-corruption character education based on social media that has been developed has been integrated and organized by utilizing social media facilities for character education."

Keywords: smart parenting management, anti-corruption character, social media.
